

Compass EMP Conservative to Moderate Fund

A Diversified, Tax Efficient, Global Multi Asset Class Mutual Fund

Compass Efficient Model Portfolios

Compass EMP Conservative to Moderate Fund

The Compass EMP Conservative to Moderate Fund is a passive strategic asset allocation fund structured to provide diversification among many asset classes, markets and economies around the world in an attempt to manage risk and improve returns. The purpose of the fund is to provide lower volatility with a similar or greater return over a full market cycle compared to the broad market indexes. The global indexing asset allocation strategy is designed to produce high positive risk adjusted returns (alpha) versus a broad world benchmark over time. The Conservative to Moderate Fund's primary objective is to achieve current income, with capital appreciation as a secondary objective.

Compass EMP Philosophy

- ✓ Compass EMP utilizes an investment process that employs global diversification among many low to negative correlating asset classes. This strategy is designed to reduce investment portfolio fluctuation and risk as well as improve long-term returns.
- ✓ Exchange Traded Funds (ETFs) are used to take advantage of many different global growth and income markets at a low cost. ETFs are highly tax efficient due to the in-kind creation and redemption of the individual holdings.
- ✓ The Compass EMP Funds have a focus on enhanced-fundamental indexed ETF's in an attempt to capture improved risk adjusted returns over the long-term.

Each ETF is subject to risks, depending on the nature of the Underlying Fund. These risks could include liquidity risk, sector risk, foreign and related currency risk as well as risks associated with real estate investments and commodities.

The Compass EMP Rebalancing Strategy

Many studies have shown that jumping in and out of the markets can be hazardous to your financial health. If your timing is off – even for just a few days – your results can be impacted significantly compared to a long-term buy-and-hold strategy.

The Compass EMP rebalancing policy is based on market movements, not by dates on the calendar or attempts to time the market. Our rebalancing policy forces a buy low sell high strategy. *As with any mutual fund, there is no guarantee that a Fund will achieve its goal.*

All markets and asset classes represented by ETFs are rebalanced back to the predetermined target if the ETF's portfolio weighting has drifted plus or minus 20% from the long-term target allocation due to market performance.

Investment Strategy

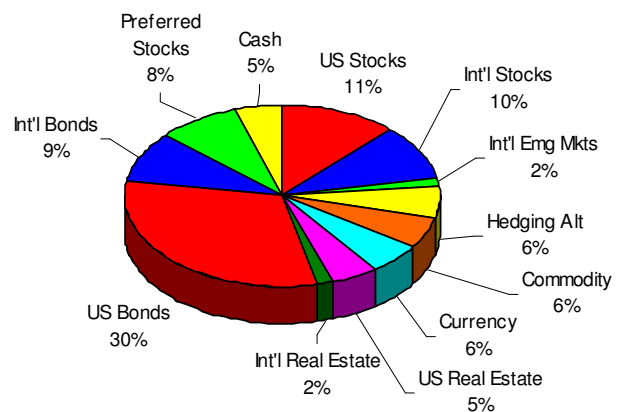

The Compass Efficient Model Portfolios are based on the Compass EMP Balanced Index Methodology

The Compass EMP Balanced Index Summary

- ✓ All asset classes and markets will be considered unless liquidity dictates otherwise.
- ✓ Only broad market indexes will be considered
- ✓ Country specific indexed ETFs will not be considered unless a particular country represents 25% or more of the world market.
- ✓ Only quality investment grade bonds will included
- ✓ Analyze possible asset class correlations over various rolling time frames
- ✓ Establish restrictions and constraints for all asset classes designed to limit risk and help achieve return objectives for each asset allocation model
- ✓ Develop a comprehensive efficient frontier analysis in order to optimize risk versus reward
- ✓ Establish strict rebalancing procedures based on market movements over time

A priority will be given to enhance indexed or fundamental indexed ETFs for the Compass EMP Funds.

Compass EMP Conservative to Moderate Fund Asset Allocation as of January 5, 2009

Available Asset Classes in the Compass Efficient Model Portfolios*

US Core Stocks	Diversified Global Currencies
